PROFESSIONAL SUMMARY

Full-stack software engineer with 2.5 years specializing in Node.js backend services, Vue.js frontends, and event-driven microservices architecture. Proven expertise in dispatch automation, logistics platform development, and legacy system modernization. Experienced in building and scaling revenue-critical platforms handling high-volume order processing within enterprise supply chain environments.

EDUCATION

- **Rajiv Gandhi Proudlyogiki Vishwavidyalaya** Bhopal, MP
Bachelors of Technology in Computer Science; GPA: 8.6 *Aug. 2019 – May. 2023*

SKILLS

- **Programming Language & Web Technologies:** Javascript, Typescript, HTML
- **Backend & Databases:** Node.js, Express.js, MongoDB, SQL
- **Framework & Libraries:** Vue.js, Vuetify, Vuex, Webpack Module Federation
- **Tools, Cloud & DevOps:** Docker, Jenkins, GitHub Actions, Git, Azure (Blob Storage, Service Bus)
- **Messaging & Monitoring:** RabbitMQ, CloudAMQP, ELK Stack (Elasticsearch, Kibana), CloudWatch
- **Integration & Auth:** Boomi iPaaS, project44 Carrier APIs, JWT, bcrypt

EXPERIENCE

- **Hub Group — Logistics & Transportation Management** Hyderabad, Telangana
Associate Full-Stack Developer *Jan 2024 - Present*
 - **Dispatch Automation Ownership:** Took ownership of the dispatch automation backend handling LTL order processing, reducing a heavily manual, ops-dependent process to one requiring minimal human intervention.
 - **Microservices Architecture:** Work across a microservices architecture with direct ownership of 3+ services in the core dispatch process, responsible for feature development, stability, and production deployments.
 - **Performance optimization:** Diagnosed and resolved API latency issues by restructuring MongoDB aggregation pipelines, adding targeted indexes on high-traffic collections.
 - **CI/CD & deployments:** Part of the Jenkins and Docker-based CI/CD workflow tag builds post-merge and coordinate deployments across Dev, QA, UAT, and Prod environments.
 - **security & audit logging:** Implemented JWT-based authentication with structured audit logging across services, ensuring full traceability for sensitive dispatch and customer operations.
 - **customer onboarding scale:** Onboarded large volumes of customers into the platform's dispatch routing system, building the configuration workflows and validation logic needed to handle that volume cleanly.
 - **Design & Architecture:** Designed scalable microservice architecture with asynchronous, event-driven communication. Handled third-party API integrations (project44, Boomi iPaaS) with retry mechanisms and failure handling. Production monitoring using ELK Stack with structured logging across all microservices for rapid incident diagnosis.

○ **Order Dispatch System:**

- * **Tech Stack:** Node.js, Vue.js, MongoDB, Boomi iPaaS, RabbitMQ, ELK Stack, project44, Microservices, JavaScript
- * Led backend dispatch orchestration, building payload transformation and routing logic connecting internal services to external carrier platforms via Boomi iPaaS.
- * Integrated project44 APIs for real-time shipment tracking and piped status updates back to the Vue.js frontend under high-throughput conditions.
- * Centralized error observability using ELK Stack with structured logging across microservices, reducing production incident diagnosis time from hours to under 30 minutes.
- * Automated orchestration pipeline eliminated the majority of manual dispatch workload handled by operations teams.

○ **CFS Scale Platform — Micro-Frontend Integration Platform :**

- * **Tech Stack:** Vue 3, TypeScript, Vuetify, Webpack Module Federation, REST APIs
- * Architected a Micro-Frontend platform using Vite Module Federation, composing multiple independently deployable Vue.js 3 applications under a unified shell with Azure AD (SAML) enterprise authentication, utilizing microservices and event-driven architecture.
- * Built the Scale Maintenance app across 5 feature domains following a strict Page → Composable → Service architecture with full TypeScript type coverage across all API interactions, ensuring a scalable and maintainable system..
- * Delivered EDI 944 945 transaction management, bulk CSV upload using PapaParse with preview and result summary, and a Chart.js interface error trend analytics dashboard, demonstrating expertise in full-stack development and data visualization.
- * Built the Customer Warehouse Management micro-frontend covering customer sites, billing codes, clone workflows, and warehouse activity config grids with typed request/response contracts, ensuring a seamless and efficient user experience..

○ **Vue.js Shared Component Library — Design System :**

- * **Tech Stack:** Vue.js 3, TypeScript, Vuetify 3, Composition API, npm
- * Designed, built, and published a typed Vue.js 3 component library to npm, adopted across 4+ enterprise internal applications, including HgDataGrid, NotificationSnackbar composable, 20+ modal components, filters, pagination, app bar, navbar, and audit history, demonstrating expertise in frontend development and design systems..
- * Standardized async UX patterns and snackbar-based error handling across all consuming apps, accelerating frontend feature delivery and eliminating duplicate UI work, ensuring a consistent and efficient development process..
- * Enforced consistent design system standards using Vuetify 3 and TypeScript across multiple Vue.js frontend teams, reducing developer onboarding time and improving overall system maintainability.

○ **Koshendra : Central Command for Internal Resources (AI Chatbot):**

- * **Tech Stack:** Vue 3, Node.js, Express.js, MongoDB, JWT, bcrypt, Llama
- * Built an internal agentic AI chatbot serving as a centralized reference system across a multi-product platform.
- * System spans 5 products with multiple modules, returning contextual answers as a live knowledge base.
- * Reduced onboarding-related IT support queries significantly through self-serve workflow assistance.
- * Implemented JWT and bcrypt authentication with persistent per-user chat history stored in MongoDB.
- * Designed architecture capable of surfacing accurate answers across products and modules, reducing dependency on IT staff.
